Reviews

Pedesterian Avoidance by Johanna

I read your proposal and loved the idea. It is nice to see being able to integrate Unity to this course. This project idea is also very useful for the real life applications. The setting of the environment is very clear in the proposal. I would also love to see how you want to train your agent.

Safety Constraint by Eosandra

Your focus for the final project looks very interesting. It is an attractive topic to be honest. It definetly worths to look more into it. Also, your proposal brings something we have not covered during the course which is exciting. I liked your idea of going for a method rather than a specific environment.

DRL in Sepsis Treatment by Manar

I loved the idea that has a potential to help people with a critical condition in real life. You have done your research, and it is nice that there is a resarch already completed. Replicating such study might help you to learn the usage of RL in medical settings and maybe even inspires to further your application with a different population.
